

AcmeLIMS API Documentation

Version: 1.0

Get Sample Details

Retrieves information about a specific laboratory sample.

Authentication

All API requests require a valid bearer token.

Endpoint

GET /api/v1/samples/{sampleId}

Description

Returns detailed information about a sample, including its status, registration date, and associated test information.

Request Parameters

Parameter	Type	Required	Description
sampleId	String	Yes	Unique sample identifier

Example Request

```
GET /api/v1/samples/SMP-12345
Authorization: Bearer <access_token>
```

Example Response

```
JSON
{
  "sampleId": "SMP-12345",
  "sampleStatus": "Validated",
  "sampleType": "Water",
  "registrationDate": "2026-07-04",
  "assignedLaboratory": "Environmental Testing",
  "tests": [
    {
      "testCode": "PH",
      "status": "Complete"
    },
    {
      "testCode": "TDS",
      "status": "Complete"
    }
  ]
}
```

Response Fields

Field	Type	Description
sampleId	String	Sample identifier
sampleStatus	String	Current sample status
sampleType	String	Sample category
registrationDate	Date	Date the sample was registered
assignedLaboratory	String	Laboratory responsible for testing
tests	Array	List of associated tests

Response Codes

Code	Description
200	Request successful
400	Invalid request
401	Authentication failed
404	Sample not found
500	Internal server error

Notes

- A valid API access token is required.
- Users can only retrieve samples that they have permission to access.
- Dates are returned in ISO 8601 format.
